IN THE CLAIMS

Please amend the claims as follows:

1-3. (Canceled)

4. (Previously Presented) A method of displaying a queue of print jobs of a printing device including a printing job controller and a display unit, the method comprising:

calculating a time required to process a print job using the printing job controller;

reading out a current status of the print job using the printing job controller;

displaying an image having a size proportional to the time required and filled with a repeating pixel pattern on the display unit of the printing device; and

changing the repeating pixel pattern according to the current status.

5-14. (Canceled)
